EDUCATION

The University of Texas at Austin	May 2021
Master of Science in Business Analytics	GPA: 3.96
The University of Texas at Austin	May 2020
Bachelor of Science in Computer Science	GPA: 3.86

TECHNICAL SKILLS

Programming: Python, R, SQL, SAS, DDL, ETL, Kotlin, Sparks, Java, JavaScript, C, Haskell, Swift, C++, React, Terraform
Modeling & Tools: SpringBoot, React, Django, TensorFlow, Scikit-learn, Pandas, Tableau, Time Series Forecasting, NLP, A/B Testing, Gurobi, AWS

EXPERIENCE

- Indeed – Software Engineer II, Employer Recommendation Team; Austin, Texas** July 2025 – Present
- Lead and design initiatives within employer-side recommendation retrieval and delivering qualified candidates to power employer sourcing and premium job experience.
 - Proactively address technical and operational debts through DFR cycle and lead data-driven A/B Testing initiatives to improve employer recommendation systems's performance and quality.
- Indeed – Software Engineer, Match Recommender Team; Austin, Texas** May 2024 – June 2025
- Developed and maintained Match Provider systems that utilize diverse criteria and advanced methodologies to align job opportunities between Job Seekers and Employers through Machine Learning and SWE principles.
 - Participate in the DFR cycle proactively identifying and resolving technical and operational debts and issues.
 - Design and execute data-driven A/B testing and analytics initiatives to evaluate and enhance the performance and quality of the recommendation system for Job Seekers.
- Indeed – Software Engineer, Ranking Capabilities Team; Austin, Texas** August 2023 – May 2024
- Maintained and improved systems and algorithms for core job search service systems.
 - Launched experiments for new features regarding collapsing duplicate jobs and maintaining the Job Search code base.
- Indeed – Research Engineer, Search Quality Team; Austin, Texas** August 2022 – July 2023
- Aided the team to maintain and create new features for Indeed Help Center using React, A/B testing and Java.
 - Co-Drive and developed to maintain and launch new features for GotAJob website using React, Java and Terraform.
- Indeed – Associate Research Engineer, Search Quality Team; Austin, Texas** August 2021 – July 2022
- Helped the team to maintain and create new features for Help Center Contact form using React, A/B testing and Java.
 - Developed and analyzed with a team of four people to launch the GotAJob website using React, Java and Datadog.
- Dell – Capstone Project, EUC Ecosystem Team; Austin, Texas** November 2020 – May 2021
- Developed automated Chatbot customer services to increase efficiency of configurations of the hardware systems inquiries using Deep Learning and NLP.
 - Consulted with Dell's stakeholders to clarify scope of problem and project.
- CDW – Data Science Intern, Data Science & Analytics team; Lincolnshire, Illinois** June 2020 – August 2020
- Developed new data sources using Multidimensional scaling, fine-tuned clustering and predictive model parameter to improve the support capacity and efficiency for the Customer Support Division, using Python and ML packages.
 - Created new algorithm to automate and improve workload by 50% for 60000+ sales and support inquiries.
 - Presented data-driven recommendations weekly to management stakeholders.
- The University of Texas at Austin - Teaching Assistant; Austin, Texas** September 2019 – May 2020
- Provided classroom support to two upper-division Computer Science classes: Algorithms and Complexity and Introduction to Computer Security.
 - Graded assignments for faculty, held office hours to support individual student, and prepared course materials.
- Tencent – Game Development Intern, Online Media Group; Beijing, China** May 2018 – July 2018
- Coordinated Online Media Group (OMG) with releases of three mobile games.
 - Collaborated with members of OMG to fix bugs and troubleshoot problems prior to release for the PlayerUnknown's Battlegrounds (PUBG) Mobile, a popular game around 10 million population worldwide.
 - Maintained Game News web page affiliated with Tencent using HTML on a daily basis.
 - Edited news articles pertaining to mobile gaming and game announcement poster using Photoshop.

TECHNICAL PROJECTS

Doodle Image Recognition Project, [Medium Blog](#)

Fall

2020

- Participated in Kaggle Competition in a team of five to analyze 'Quick, Draw! Doodle Recognition Challenge'.
- Classified Drawings using Deep Learning Models: CNN, ResNet, MobileNet, utilizing Numpy and TensorFlow to achieve up to 92.5% accuracy across 340 classes.

Airbnb Database Management

Fall

2020

- Collaborated with teammates to implement ETL by creating 3 transaction databases, Data Warehouse using DDL and Oracle SQL, and Data lake to generate Business Insights using Sparks.

Text Analytics - What makes a hit/flop action movie?

Fall 2020

- Scraped 15k best and worst action movies reviews on IMDB and implemented topic modeling, NetworkX network graphs, and LDA to identify the elements that make movies Hits or Flops.

Food-Ninja Nutrition Website

Spring 2020

- Extracted 1000+ instances and 20+ attributes of data using external third-party APIs and stored them into MySQL relational databases for consumers to search for nutritional information and recipes.
- Implemented back-end functions to supply data for the construction of the website using Python and Django.

Space Pirates Game

Fall

2020

- Developed game using C++ featuring a Player Package, an AI package, containing smart tile navigations, a Skill Enhancement system, allowing players to customize and enhance the characters' abilities, and Procedural Generation.
- Exhibited at The University of Texas at Austin's Digital Demo Day event.
